

QUESTIONS & ANSWERS

Q: What is the paperless drywall solution from Georgia-Pacific?

A: DensArmor Plus® gypsum drywall with fiberglass facings is a new generation paperless drywall designed as a replacement for traditional paper-faced drywall for residential interiors. Mold can develop when the combination of the right temperature, mold spores, moisture and a food source are present. One food source is paper, so using the fiberglass facings instead of paper-facings found on traditional drywall removes a potential food source for mold. For areas where high humidity levels may be present DensArmor Plus® provides the added benefit of a moisture-resistant core.

Q: How much does DensArmor Plus® paperless drywall cost?

A: It is moderately more than moisture-resistant paper-faced drywall (greenboard). If you were going to finish or completely remodel a basement 1000 square feet in size, you would need approximately 100, 4' x 8' sheets to cover every wall in the basement. The increased cost for paperless drywall above standard greenboard would be about \$350 for this relatively large project. Prices vary per region. Check with your local Lowe's for current pricing of DensArmor Plus paperless drywall.

Q: Where can my builder, remodeler or I get it?

A: It's available at Lowe's.

Q: Is it hard to install?

A: Not at all. You will discover that DensArmor Plus® paperless drywall panels cut and fasten like traditional gypsum drywall. Use traditional drywall nails and screws to fasten them. For complete installation and finishing instructions, download the installation guide.

Q: Where should DensArmor Plus® paperless drywall be used?

A: DensArmor Plus® paperless drywall is an ideal replacement for regular drywall throughout the home. Consider using DensArmor Plus® in commercial applications as well, where its moisture-resistant core can be advantageous.

Q: Can DensArmor Plus® paperless drywall be used as an exterior sheathing?

A: No, DensArmor Plus paperless drywall should not be used on any exterior application.

Q: How about finishing DensArmor Plus® paperless drywall?

A: DensArmor Plus® panels can be finished in the same steps and using the same tools as regular paper-faced drywall panels. For complete installation and finishing instructions, download the installation guide. It includes finishing tips for a complete, paperless installation.

Q: Is DensArmor Plus® paperless drywall mold-proof?

A: Mold can grow on virtually any surface when exposed to the right elements. DensArmor Plus® paperless drywall is mold-resistant (when tested, as manufactured, in accordance with ASTM D 3273) and incorporates a proven paperless design that eliminates the traditional paper facings which, under the right conditions, could provide a food source for mold to grow.

Q: Where can I find additional technical information on DensArmor Plus® brand paperless drywall from Georgia-Pacific?

A: For additional information, visit www.stopfeedingmold.com, www.densarmorplus.com.

Or call 1-800 BUILD GP (1-800-284-5347).

Q: Does DensArmor Plus® have an exposure warranty?

A: Yes. In addition to being warranted against manufacturing defects, DensArmor Plus® will not deteriorate or delaminate due to normal exposure to weather conditions or excessive humidity for a period of six months. This is why it's the choice of commercial contractors for buildings prior to closing-in.
