

STOP FEEDING MOLD™

WHERE TO BUY

Available at a Lowe's near you.

TALK DRYWALL LIKE A PRO

Here are some important points to know when discussing DensArmor Plus® paperless drywall with your builder, spouse or friends.

#1: DensArmor Plus® paperless drywall is moisture- and mold-resistant. The manufacturing process incorporates a patented process that uses fiberglass facings on the front and back facings of the gypsum drywall panel instead of paper. If you remove the paper from the surface, you help reduce the chances for mold.

#2: DensArmor Plus® paperless drywall is an ideal replacement for regular drywall throughout the house. DensArmor Plus® paperless drywall offers a couple of very important benefits over and above traditional drywall: it is moisture- and mold-resistant and provides superior fire resistance compared to the regular paper-faced product.

#3: If you can install traditional drywall, you can install the paperless product. DensArmor Plus® paperless drywall is not hard to install. No special tools are required. It cuts with standard drywall tools and fastens with traditional nails and screws. It can be finished in the same steps as traditional drywall. A drywall hanger who knows how to install regular drywall can install DensArmor Plus® drywall as well.

#4: Tell your builder or remodeler that this paperless product scored the highest level of performance for mold resistance under the ASTM D 3273 test method. Here are the technical terms they will understand: When tested, as manufactured, in accordance with ASTM D 3273, DensArmor Plus® paperless drywall panels score a 10, the highest level of performance for mold resistance under the ASTM D 3273 test method. The score of 10, in the ASTM D 3273 test, indicates no mold growth in a 4-week controlled laboratory test. The mold resistance of any building product when used in actual job site conditions may not produce the same results as were achieved in the controlled, laboratory setting. No material can be considered mold proof. When properly used with good design, handling and construction practices, DensArmor Plus® paperless drywall provides increased mold resistance compared to standard paper-faced wallboard products.

#5: I want it. No need to apologize for wanting top-performing materials inside your walls. Ask for DensArmor Plus® paperless interior drywall – only from Georgia-Pacific. No one else makes it, so ask for it by name – and STOP FEEDING MOLD™.
